This Window displays the
help. To get help Right Click
mouse on the desired item.

This box displays
prompts and user
information.

Use these buttons to
adjust the Parameter
up or down.
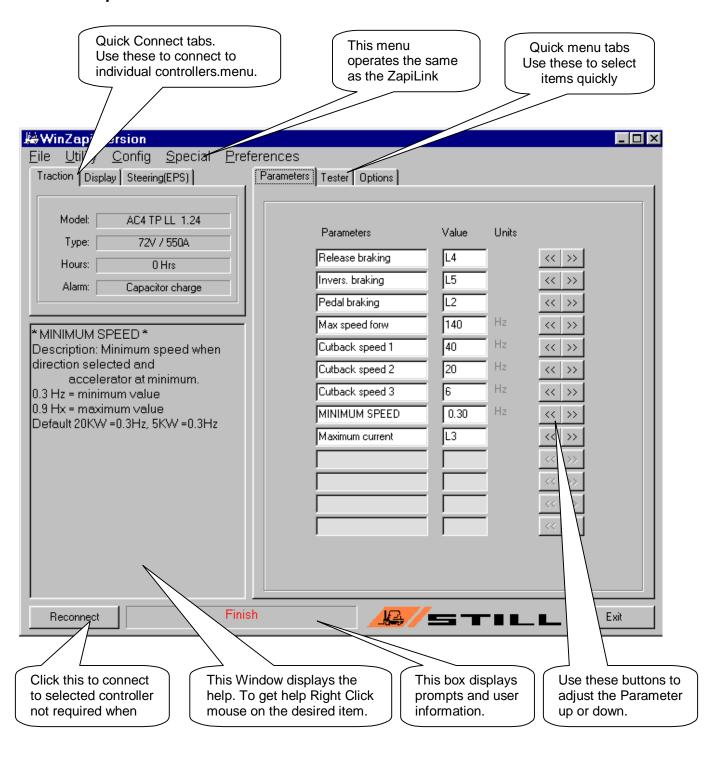

Installation

The installation package is provided as a ZIP file to allow emailing through firewalls. Unzip the single install EXE and run.

The first time WinZapi is used after installation, it will prompt for an authorisation code. This is to control the distribution of the beta release.

The language of the beta is English only, although German French and Italian will be available for the full release.

Quick guide to getting started

To start WinZapi click the icon on the desktop or from the WinZapi folder in the start menu.

To load Parameters for Traction.

Start WinZapi.
Click on the Traction Tab.
Click the "Get Parameters" Button .

The Parameters should now be loaded and visible in the Parameters window.

To Load the Special Adjust Menu for Traction

Start WinZapi.
In the menu select "Special" and then "Special Adjust".
(A new tab should appear next to options)
Click on the Traction Tab.
Click the "Get Special Adjustments" Button .

The Special Adjustments should now be loaded and visible in the Parameters window.

Generally if an option is not visible then select it from the menu to make it visible.

To Change Language

Choose "Preferences","Settings".
The Settings window will now be displayed.
Click the "Change Language File" button.
Choose the new Language File.
Click Open.
Click Exit to close the Settings Box.

The program language should now be updated.
